

# 22/04-2021

## Since last meeting

- Expanded on financial literacy in Guinea
- Expanded on the regulations of the e-money license
- Wrote a brief explanation of the protocol
- Implemented the C# server with a simple LINQ database

## This meeting

- Discuss who goes first, the agent or the user?
  - Personal argument: The agent is most likely more familiar with the network and has a reputation to keep, but I know Søren has a different take :-)

## For next time (as much as possible)

- Deploy server to heroku
- Hook server up to USSD
- Develop Android Client and hook up to server
